
Table of Contents

Preface	xv
1. Introduction	1
Automation Is a Must	1
How Perl Can Help You	2
This Book Will Show You How	3
What You Need	5
Some Notes About the Perl Versions Used for This Book	6
What About Perl 5.10?	6
What About Strawberry Perl?	6
What About Perl 6?	6
Some Notes About Using Vista with the Code in This Book	7
Locating and Installing Modules	8
Installing Modules on Unix	9
Installing Modules on Win32	9
It's Not Easy Being Omnipotent	10
Don't Do It	10
Drop Your Privileges As Soon As Possible	10
Be Careful When Reading Data	11
Be Careful When Writing Data	12
Avoid Race Conditions	12
Enjoy	13
References for More Information	13
2. Filesystems	15
Perl to the Rescue	15
Filesystem Differences	16
Unix	16
Windows-Based Operating Systems	16
Mac OS X	18
Filesystem Differences Summary	19
Dealing with Filesystem Differences from Perl	19

Walking or Traversing the Filesystem by Hand	21
Walking the Filesystem Using the File::Find Module	26
Walking the Filesystem Using the File::Find::Rule Module	36
Manipulating Disk Quotas	38
Editing Quotas with edquota Trickery	40
Editing Quotas Using the Quota Module	44
Editing NTFS Quotas Under Windows	45
Querying Filesystem Usage	46
Module Information for This Chapter	48
References for More Information	48
3. User Accounts	49
Unix User Identities	50
The Classic Unix Password File	50
Changes to the Password File in BSD 4.4 Systems	57
Shadow Passwords	58
Windows-Based Operating System User Identities	59
Windows User Identity Storage and Access	59
Windows User ID Numbers	61
Windows Passwords Don't Play Nice with Unix Passwords	63
Windows Groups	63
Windows User Rights	68
Building an Account System to Manage Users	71
The Backend Database	73
The Low-Level Component Library	78
The Process Scripts	89
Account System Wrap-Up	94
Module Information for This Chapter	97
References for More Information	97
Unix Password Files	97
Windows User Administration	98
4. User Activity	99
Process Management	100
Windows-Based Operating System Process Control	100
Unix Process Control	119
File and Network Operations	125
Tracking File Operations on Windows	125
Tracking Network Operations on Windows	128
Tracking File and Network Operations in Unix	129
Module Information for This Chapter	135
Installing Win32::Setupsup	135
References for More Information	136

5. TCP/IP Name and Configuration Services	137
Host Files	137
Generating Host Files	140
Error-Checking the Host File Generation Process	143
Improving the Host File Output	144
Incorporating a Source Code Control System	148
NIS, NIS+, and WINS	151
NIS+	154
Windows Internet Name Server (WINS)	154
Domain Name Service (DNS)	155
Generating DNS (BIND) Configuration Files	156
DNS Checking: An Iterative Approach	165
DHCP	174
Active Probing for Rogue DHCP Servers	176
Monitoring Legitimate DHCP Servers	181
Module Information for This Chapter	183
References for More Information	184
 6. Working with Configuration Files	 185
Configuration File Formats	188
Binary	188
Naked Delimited Data	189
Key/Value Pairs	190
Markup Languages	192
All-in-One Modules	235
Advanced Configuration Storage Mechanisms	236
Module Information for This Chapter	236
References for More Information	237
XML and YAML	237
 7. SQL Database Administration	 239
Interacting with a SQL Server from Perl	240
Using the DBI Framework	243
Using ODBC from Within DBI	249
Server Documentation	251
MySQL Server via DBI	252
Oracle Server via DBI	254
Microsoft SQL Server via ODBC	255
Database Logins	258
Monitoring Space Usage on a Database Server	260
Module Information for This Chapter	263
References for More Information	263
DBI	263

Microsoft SQL Server	264
ODBC	264
Oracle	264
8. Email	265
Sending Mail	265
Getting sendmail (or a Similar Mail Transport Agent)	266
Using the OS-Specific IPC Framework to Drive a Mail Client	266
Speaking the Mail Protocols Directly	268
Common Mistakes in Sending Email	273
Overzealous Message Sending	273
Subject Line Waste	282
Insufficient Information in the Message Body	282
Fetching Mail	285
Talking POP3 to Fetch Mail	285
Talking IMAP4rev1 to Fetch Mail	287
Processing Mail	291
Dissecting a Single Message	291
Dissecting a Whole Mailbox	296
Dealing with Spam	297
Support Mail Augmentation	305
Module Information for This Chapter	310
References for More Information	311
9. Directory Services	313
What's a Directory?	313
Finger: A Simple Directory Service	314
The WHOIS Directory Service	318
LDAP: A Sophisticated Directory Service	321
LDAP Programming with Perl	322
The Initial LDAP Connection	323
Performing LDAP Searches	325
Entry Representation in Perl	329
Adding Entries with LDIF	331
Adding Entries with Standard LDAP Operations	333
Deleting Entries	334
Modifying Entry Names	335
Modifying Entry Attributes	337
Deeper LDAP Topics	339
Putting It All Together	348
Active Directory Service Interfaces	354
ADSI Basics	355
Using ADSI from Perl	357

Dealing with Container/Collection Objects	359
Identifying a Container Object	360
So How Do You Know Anything About an Object?	360
Searching	363
Performing Common Tasks Using the WinNT and LDAP Namespaces	366
Working with Users via ADSI	367
Working with Groups via ADSI	369
Working with File Shares via ADSI	369
Working with Print Queues and Print Jobs via ADSI	370
Working with Windows-Based Operating System Services via ADSI	371
Module Information for This Chapter	373
References for More Information	373
LDAP	373
ADSI	374
10. Log Files	377
Reading Text Logs	377
Reading Binary Log Files	378
Using unpack()	378
Calling an OS (or Someone Else's) Binary	383
Using the OS's Logging API	384
Structure of Log File Data	385
Dealing with Log File Information	388
Space Management of Logging Information	388
Log Parsing and Analysis	395
Writing Your Own Log Files	425
Logging Shortcuts and Formatting Help	425
Basic/Intermediate Logging Frameworks	426
Advanced Logging Framework	428
Module Information for This Chapter	429
References for More Information	430
11. Security	433
Noticing Unexpected or Unauthorized Changes	434
Local Filesystem Changes	434
Changes in Data Served Over the Network	440
Noticing Suspicious Activities	442
Local Signs of Peril	442
Finding Problematic Patterns	444
Danger on the Wire, or "Perl Saves the Day"	449
Preventing Suspicious Activities	460
Suggest Better Passwords	460
Reject Bad Passwords	461

Module Information for This Chapter	466
References for More Information	467
12. SNMP	469
Using SNMP from Perl	469
Sending and Receiving SNMP Traps, Notifications, and Informs	480
Alternative SNMP Programming Interfaces	484
Module Information for This Chapter	486
References for More Information	486
13. Network Mapping and Monitoring	489
Network Mapping	489
Discovering Hosts	490
Discovering Network Services	499
Physical Location	501
Presenting the Information	503
Textual Presentation Tools	503
Graphical Presentation Tools	507
Monitoring Frameworks	522
Extending Existing Monitoring Packages	524
What's Left?	526
Module Information for This Chapter	527
References for More Information	527
14. Experiential Learning	529
Playing with Timelines	530
Task One: Parsing crontab Files	530
Task Two: Displaying the Timeline	531
Task Three: Writing Out the Correct XML File	533
Putting It All Together	534
Summary: What Can We Learn from This?	536
Playing with Geocoding	537
Geocoding from Postal Addresses	537
Geocoding from IP Addresses	541
Summary: What Can We Learn from This?	544
Playing with an MP3 Collection	544
Summary: What Can We Learn from This?	546
One Final Exploration	546
Part One: Retrieving the Wiki Page with WWW::Mechanize	547
Part Two: Extracting the Data	550
Part Three: Geocoding and Mapping the Data	551
Summary: What Can We Learn from This?	554
Remember to Play	555

Module Information for This Chapter	555
Source Material for This Chapter	556
A. The Eight-Minute XML Tutorial	557
B. The 10-Minute XPath Tutorial	563
C. The 10-Minute LDAP Tutorial	573
D. The 15-Minute SQL Tutorial	579
E. The Five-Minute RCS Tutorial	593
F. The Two-Minute VBScript-to-Perl Tutorial	597
G. The 20-Minute SNMP Tutorial	603
Index	617
